sobre nosotros

Ezequiel Gutesman

Fernando Russ

(si tenes menos de 30)

y de qué vamos a hablar?

- (un poco de) De AWS
- Qué servicios ofrece AWS para desarrollar software
- Cómo los usamos desde Python

De qué NO vamos a hablar?

Cómo virtualizar tu
infraestructura existente

Marketing

Momento de keywords

SaaS Software as a Service

PaaS Platform as a Service

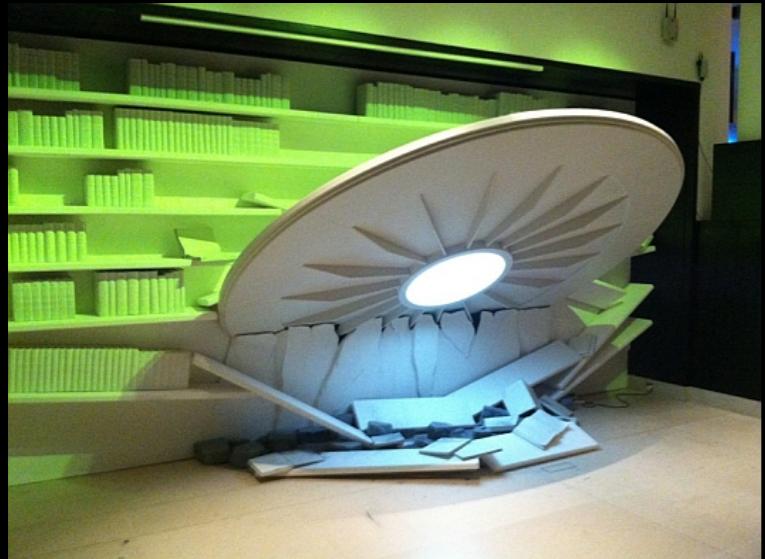

IaaS Infrastructure as a Service

Que no es AWS

no es un hosting,
no es un datacenter mágico,
no alquilan computadoras,
no alquilan enlaces de datos,
no es un VMWare/ESX(!)

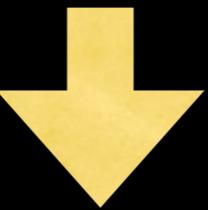

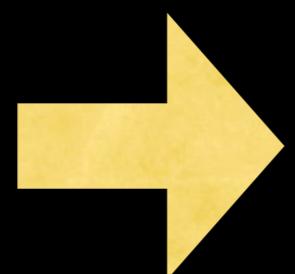

De dónde salieron estos aliens?

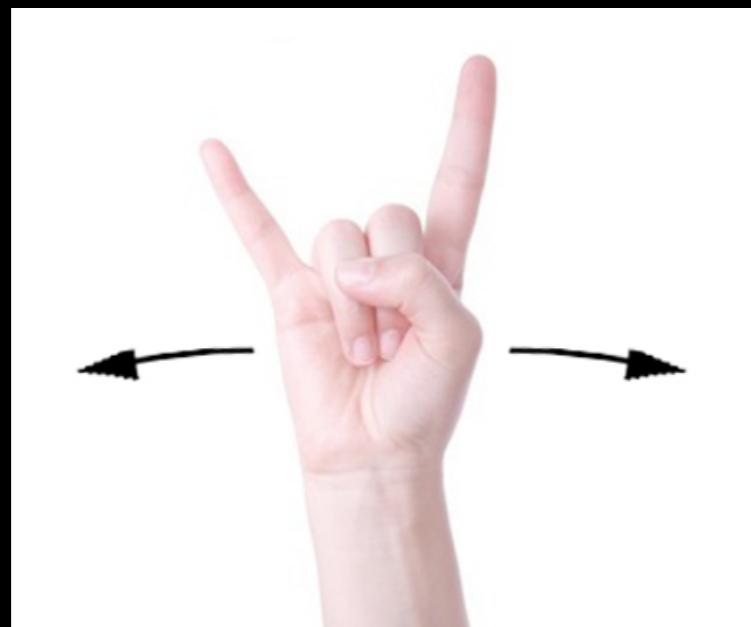

circa 2004

C. Brown

Entonces? para que sirve?

Demandado de computo variable.

tip: es ideal construir modelos de predicción de demanda

Procesamiento ocasional de grandes datasets.

Baja barrera de entrada.

Se puede armar toda una infraestructura con una tarjeta de crédito en muy poco tiempo.

Todo es tarifado

Pay as you go

Free Tier

La mayoría de los servicios tiene un límite a partir del que te empiezan a cobrar.

Costos difíciles de calcular,
ej, read/writes a "disco"(IOPS), u\$s0,14
1 millón de I/O (!)

<https://blog.cloudvertical.com/2012/10/aws-cost-cheat-sheet-2/>

Availability zones

Availability Zone x Region

2x US West (Oregon, North California)

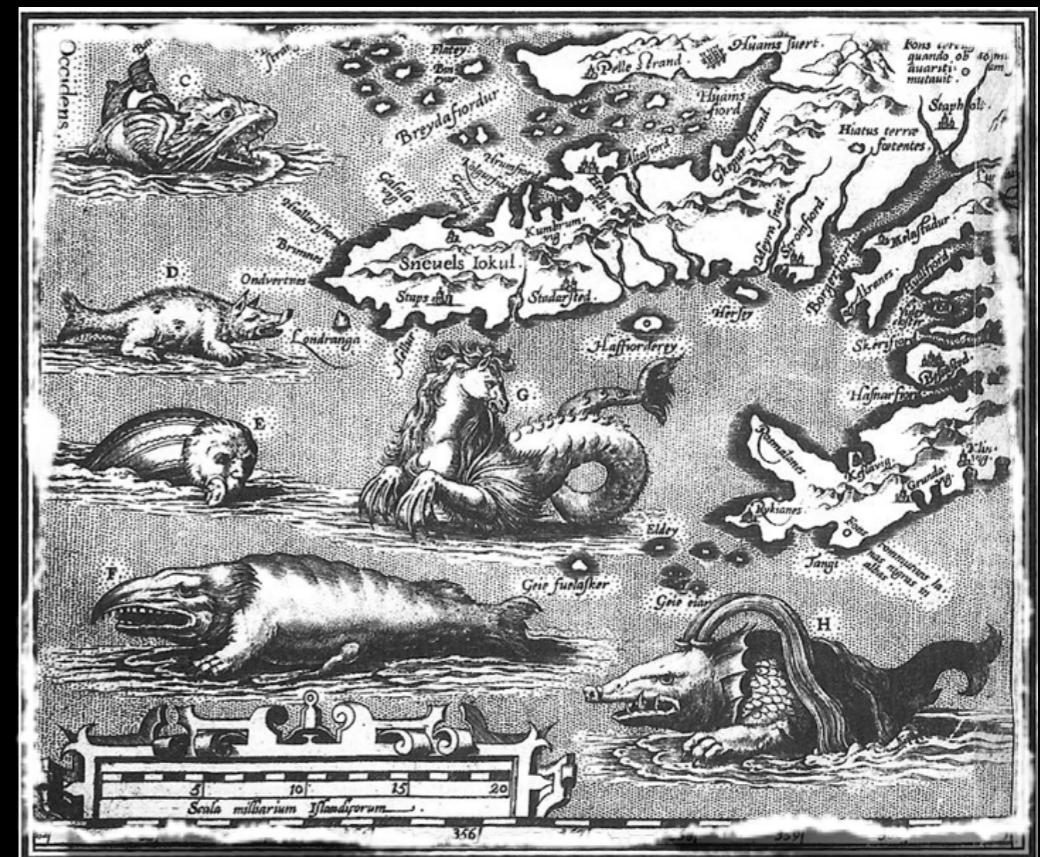

1x US East (Virginia)

1x EU (Ireland)

3x Asia (Tokyo, Singapore, Sidney)

1x South America (Sao Pualo)

+ GovCloud. (government cloud)

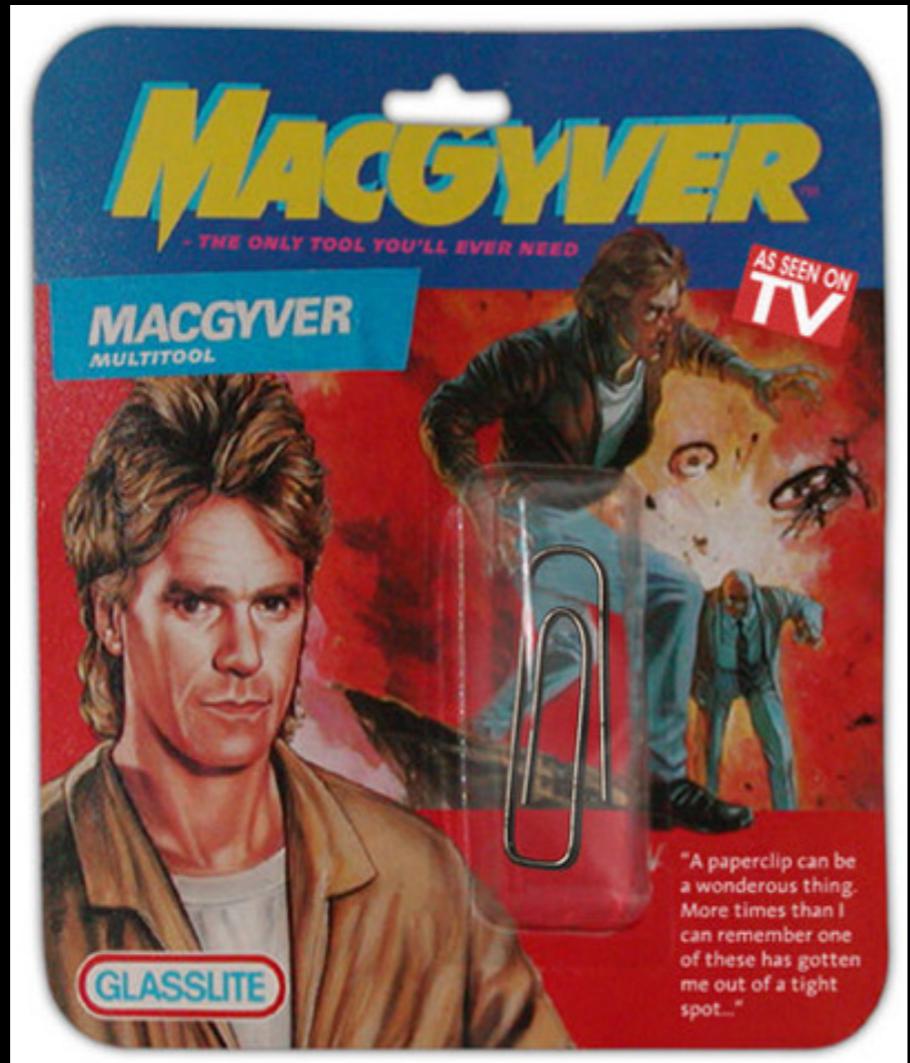

cambia el modelo de desarrollo

Todo puede fallar en cualquier momento (!)
La latencia es un problema y es variable,
La instancia como unidad de paralelismo.
Consistencia eventual. (!)
In-memory processing.
Estacionalidad. (The prime time effect (!))
Ciclos de release

un buen toolbox

Mantras,

key management,
automatizar,
deployment
toolify (?)

fabric

(Interfaz para usar SSH desde python)

un buen toolbox
